

REFAL

PROFESSIONAL MOWER

Del Morino
FARM & GARDEN EQUIPMENT

The mower has alternating motion blades, suitable for cutting very tall grass, especially for haymaking. The versatility of the mower makes it possible to satisfy all the needs in the field of forage mowing, weed remediation between the rows of vineyards and orchards, in the maintenance of greenery, cleaning of uncultivated areas in every season of the year. The alternative section blades allow you to cut grass without jamming problems.

It provides good autonomy results thanks to its low energy demand (about 12 hours). This implement falls within the ecological framework of maintenance standards for all green spaces.

Standard technical features • frame in tubes of folded and painted steel • Total width 160 cm • oscillating blades and counter blades • Category 0 hitch to follow the irregularities of the terrain • 2 side skids
